

# How to Install Python for Engineers (Using the Anaconda Platform)

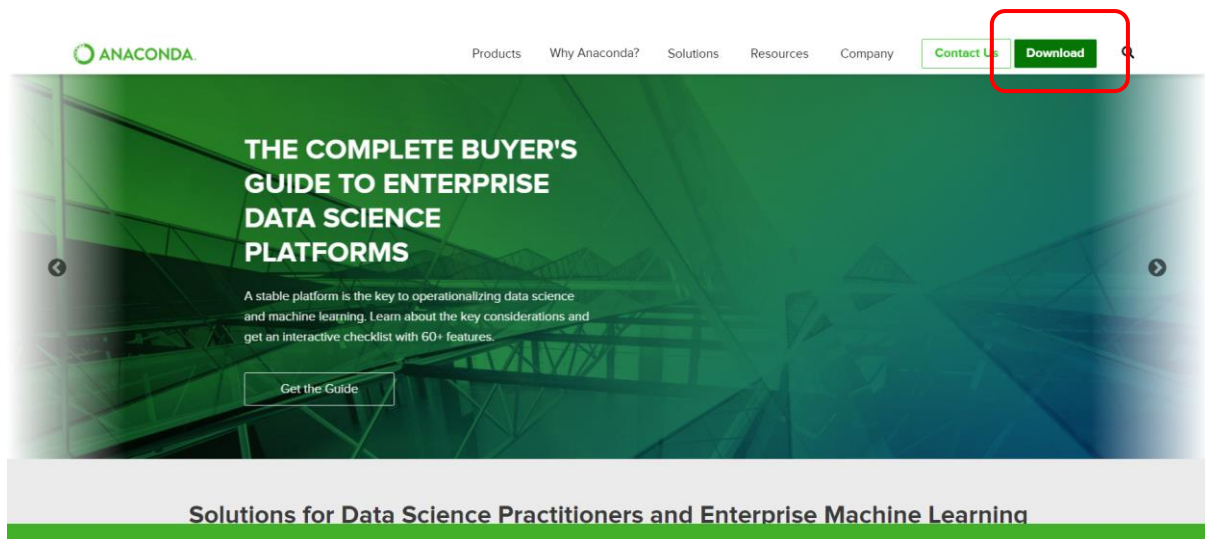

**\*\*\*If you already have a working Python (Version 3+) and have a functioning PIP you don't need to necessarily follow this tutorial\*\*\***

## 1. Google Search Anaconda

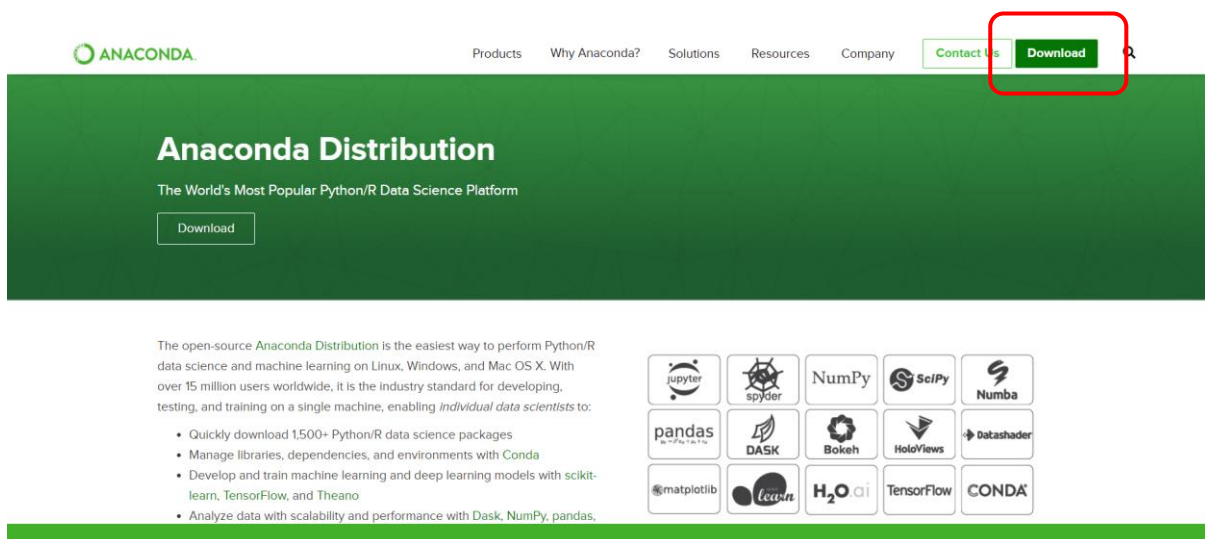

Go to the browser and search for 'Anaconda'. The link you should be looking for is [www.anaconda.com](https://www.anaconda.com). Click on the link.

## 2. Click on the Download button on the TOP RIGHT

## 3. Click Download button below Anaconda Distribution

## 4. Downloading the Installer

Choose your operating system from the top (Windows macOS or Linux)

For **windows** Download Python 3.7 (or any Python 3 Version)

Make sure to properly select 64bit or 32 bit based on your operating system.

To find that press (Windows Key + Pause Break Button) to open device specs to check.

Windows | macOS | Linux

### Anaconda 2019.10 for Windows Installer

#### Python 3.7 version

[Download](#)

64-Bit Graphical Installer (462 MB)  
32-Bit Graphical Installer (410 MB)

#### Python 2.7 version

[Download](#)

64-Bit Graphical Installer (413 MB)  
32-Bit Graphical Installer (356 MB)

### Get Started with Anaconda Distribution

System

Control Panel > System and Security > System

Control Panel Home

- Device Manager
- Remote settings
- System protection
- Advanced system settings

#### View basic information about your computer

Windows edition

Windows 10 Pro  
© 2019 Microsoft Corporation. All rights reserved.

System

Processor: Intel(R) Core(TM) i5-6300HQ CPU @ 2.30GHz 2.30 GHz  
Installed memory (RAM): 12.0 GB  
System type: 64-bit Operating System, x64-based processor  
Pen and Touch: No Pen or Touch Input is available for this Display

Computer name, domain, and workgroup settings

Computer name: DESKTOP-LV57M3T [Change settings](#)  
Full computer name: DESKTOP-LV57M3T  
Computer description:  
Workgroup: WORKGROUP

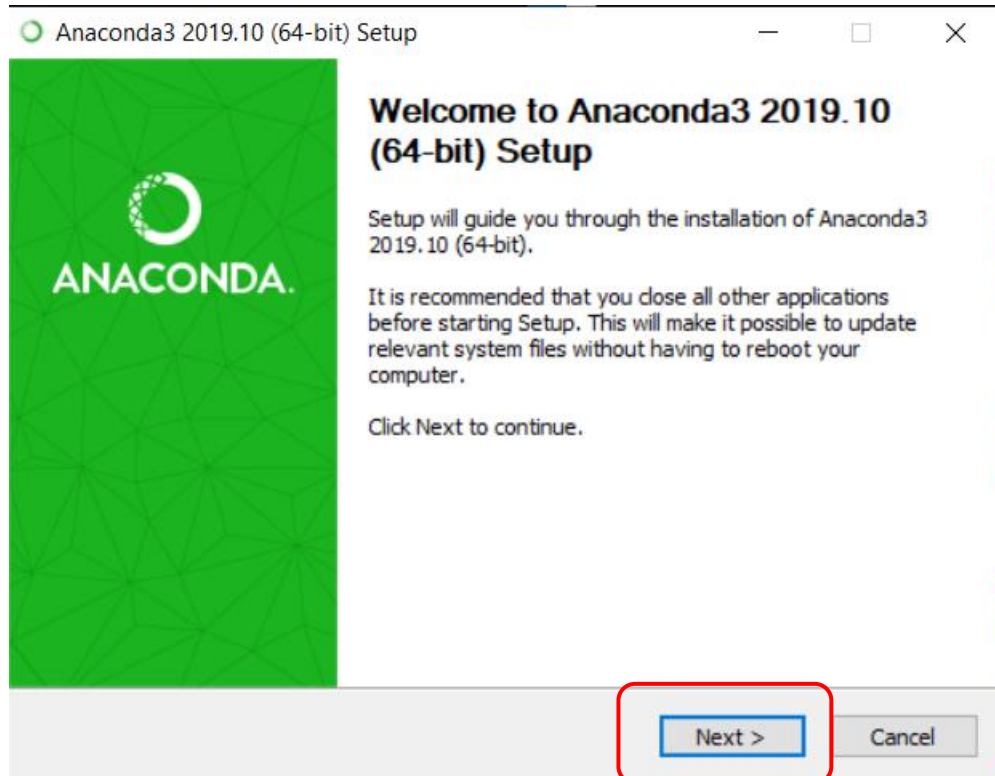

Windows activation

Windows is activated [Read the Microsoft Software License Terms](#)  
Product ID: 00330-80000-00000-AA922 [Change product key](#)

Security and Maintenance

## 5. Once Downloaded Open Installer EXE file

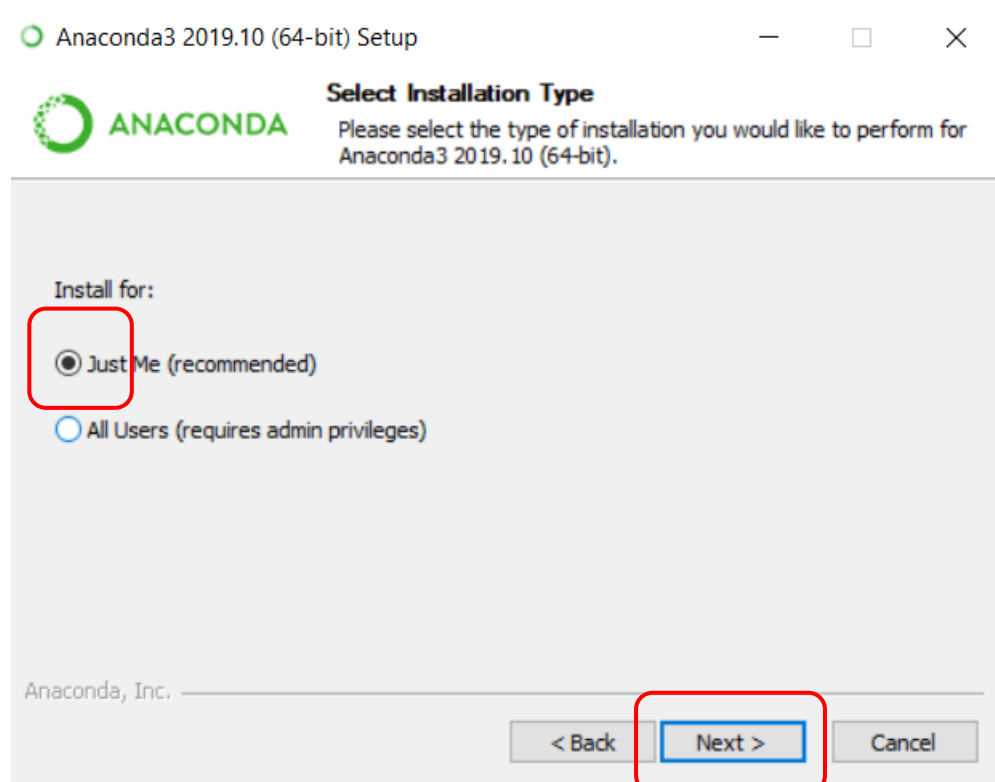

Click Next After Opening

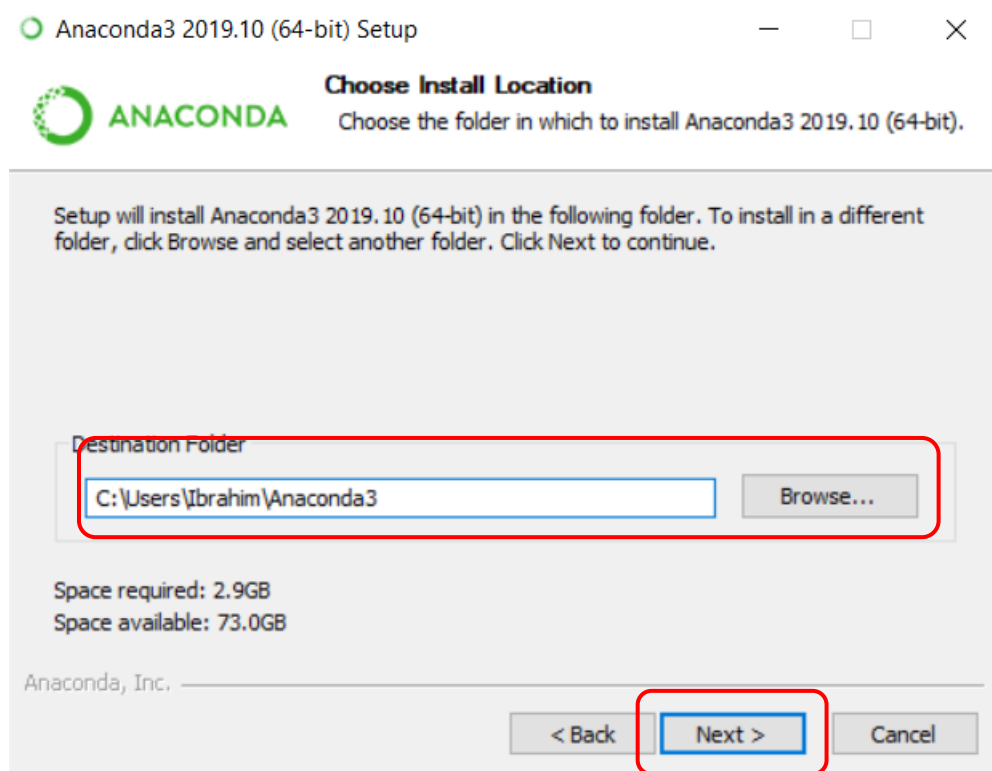

Agree to the Terms and Conditions

Click Next to Continue

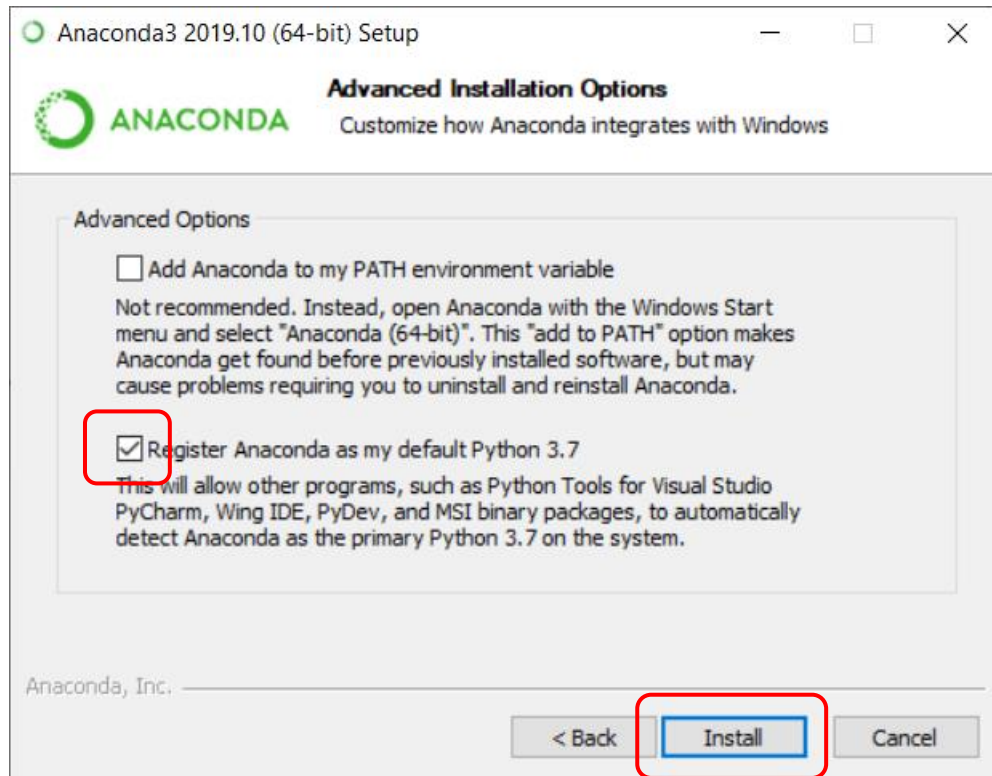

Install Anaconda anywhere on your C:\ Drive with no spaces in the name. For example “C:\My Anaconda” is a bad name as it may cause errors due to spaces. You can use a name like “C:\Anaconda3” or “C:\Anaconda”.

Click “Register Anaconda as my default Python 3.X”

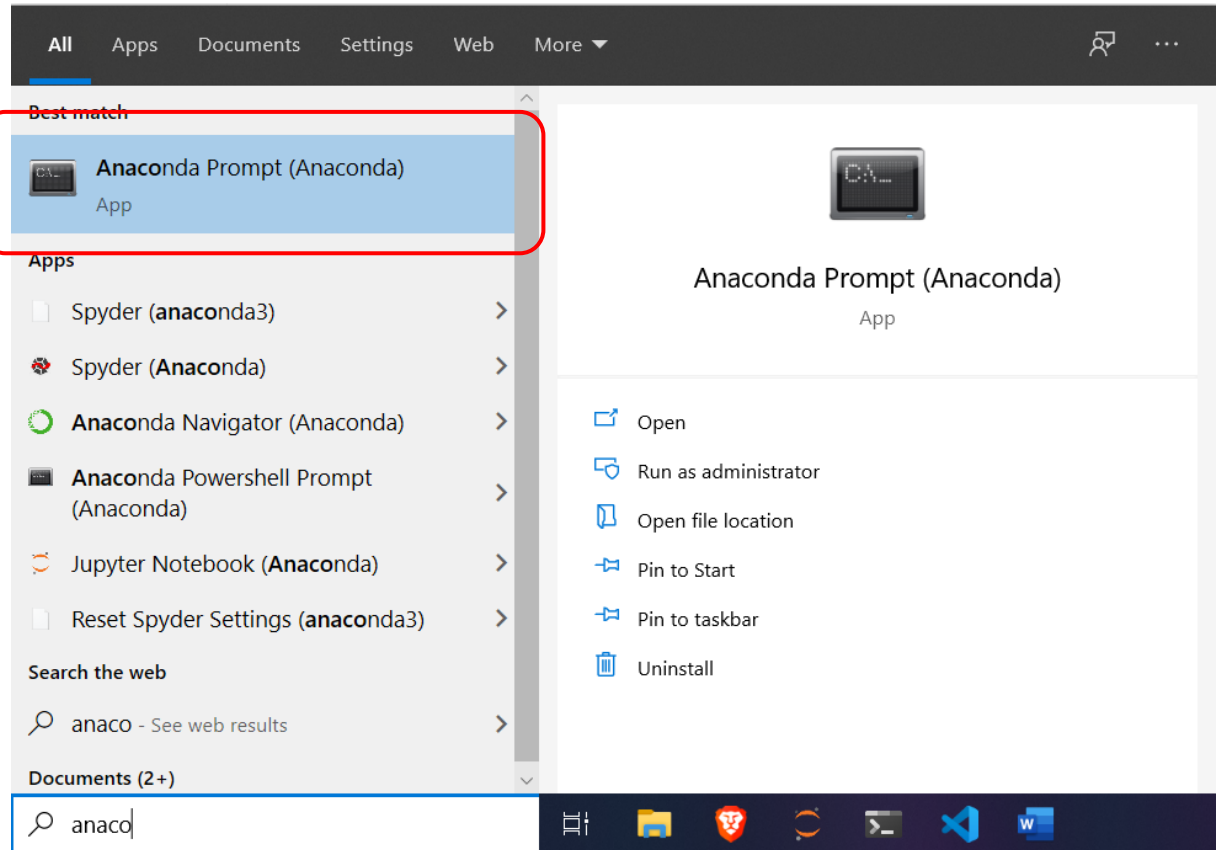

Do not add Anaconda to PATH

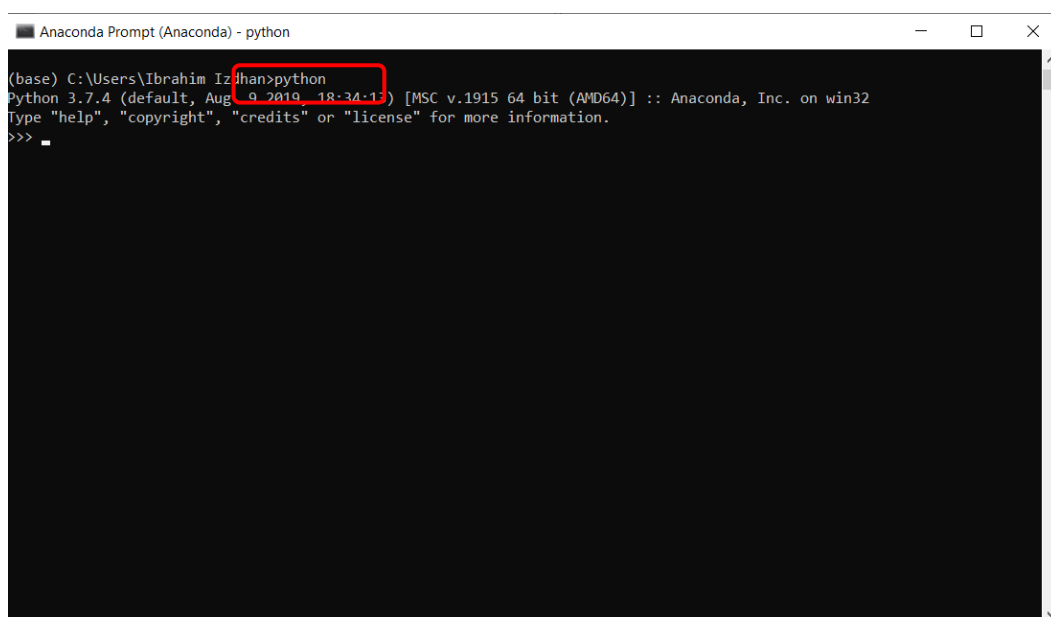

Click Install and It should complete without errors.

## 6. Checking whether installation is successful

Search for and open Anaconda Prompt(Anaconda)

Type *python* in the prompt and it should open Python Console.
